Services for Migrating and Running Oracle Applications and Databases on Microsoft Azure

Cloud migrations are intricate and complex projects that require expertise in order to ensure a successful and smooth migration for Oracle applications.

The IT trend of moving on-premises workloads to the cloud continues to accelerate. This is equally true for customers of Oracle solutions, who are looking to move to Microsoft Azure Cloud - the optimal cloud environment to host their Oracle databases and applications.

Datavail has helped hundreds of clients, big and small, make a successful move to the cloud. By working with us, you can achieve minimal downtime to your business operations as you transition on-premises-or another private-, third-party-, or hyperscale-cloud, to Microsoft Azure.

Datavail's Migration Services for Oracle Applications

The benefits of moving Oracle applications to Microsoft Azure are well worth the effort, but that doesn't make the migration itself less challenging. Here's how we help:

Holistic IT environment review

We determine your unique benefits, challenges, and requirements based on a complete picture of your current Oracle environment and corresponding systems.

Detailed cloud readiness report

We fully understand how ready you are to migrate your Oracle databases and applications to Azure, and if you need to take any steps to better prepare for the process.

Execution of lift and shift cloud migration

We provide the technical expertise needed for a smooth, zero-downtime migration. As part of this process, we'll provide the optimal compute and storage resources in the cloud to migrate your data.

Performance monitoring and management

We keep an eye on your IT environment's performance throughout the migration to Azure.

Software integrations

We'll integrate any software that's related to your Oracle application deployment.

Overview of Datavail's Oracle Database & Applications Services on Microsoft Azure

- Assessments, Planning, & Roadmaps

- Strategic Consulting

- Implementation and Upgrades

- Performance Tuning

- Azure Migrations for Rehosting, Replatforming, Refactoring, and Rearchitecting your Oracle Solutions

- Data and Systems Integration, ELT/ETL

- Application Performance Monitoring (APM)

- 24/7/365 Managed Services – Datavail has locations in the U.S., Canada, India, and Sri Lanka

Oracle Applications & Databases Datavail Supports

- Oracle E-Business Suite (EBS)

- Oracle Database

- Oracle EPM

- Oracle Analytics

- Siebel

- WebLogic, SOA Suite

- Oracle Data Integrator

- GoldenGate

- Oracle Exadata

- PeopleSoft
